

Chassis Inspection

- Check for excessive rust on the frame and metal parts; paint as needed.
- Check condition of propane-cylinder mounting bracket, hoses, regulator and cover.
- Check operation of LP-gas regulator; service by certified technician only.
- Check level of propane in cylinders; fill if needed.
- Check condition of suspension equalizer.
- Inspect spring shackles for adverse wear and replace if needed.
- Grease all suspension Zerk fittings, if equipped.
- Operate slideout rooms; lubricate per manufacturer's instructions.
- Operate leveling jacks; lubricate as needed.
- Service wheel bearings per maintenance schedule (12 months or 12,000 miles).
- Inspect and adjust service brakes (every 3,000 miles or annually).
- Check batteries for charge condition.
- Inspect batteries for integrity, age, corrosion, loose cables.
- Top off battery water if needed.
- Check gasoline fuel level.
- Check condition of fuel hose and fuel pump on toy haulers.
